## Subject Index of Volume 152

### *N*-acetyl derivatives

Acidity of carboxyl group of tyrosine and its analogues and derivatives studied by steady-state fluorescence spectroscopy, 73

### Acid orange 7

Near-UV–VIS light induced acid orange 7 bleaching in the presence of  $\text{SiW}_{12}\text{O}_{40}^{4-}$  catalyst, 175

### Acrylates

Formation of organic indoor air pollutants by UV-curing chemistry, 1

### Adenine derivatives

The 254 nm low intensity and 266 nm laser photochemistry of adenosine. Effect of pH and concentration on the reactive precursors of the principal products, adenine and FAPyAde, 123

### Adsorption

Photocatalytic decomposition of humic acids on  $\text{TiO}_2$ . Part I: Discussion of adsorption and mechanism, 267

### $\text{Al}_2\text{O}_3$ sol–gel

Photoelectrochemistry of photosynthetic reaction centers embedded in  $\text{Al}_2\text{O}_3$  gel, 53

### Aromatic ketones

Studies on the photostoragechemiluminescence of aromatic ketones with reactive oxygen species. Prospects for analytical applications, 11

### Azonaphthols

Excited state intramolecular proton transfer in some tautomeric azo dyes and schiff bases containing an intramolecular hydrogen bond, 183

### Benzopyrylium salts

Photochromic properties of hydrolysed benzopyrylium salts—the influence of bridging, 61

### *N,N'*-Bis-(carboxymethyl)-*N,N'*-dinitroso-1,4-phenylenediamine

Kinetic studies of the photoinitiated NO-releasing reactions of *N,N'*-bis-(carboxymethyl)-*N,N'*-dinitroso-1,4-phenylenediamine, 109

### $\text{BOd}_3$

Photocatalytic decomposition of humic acids on  $\text{TiO}_2$ . Part I: Discussion of adsorption and mechanism, 267

### Bridging

Photochromic properties of hydrolysed benzopyrylium salts—the influence of bridging, 61

### Cadmium sulfide

Photocatalytic synthesis of thio-organic compounds: case study of propan-1-thiol, 147

### Calcein

Detection of uranyl ion via fluorescence quenching and photochemical oxidation of calcein, 167

### Calix[4]arenes

A fluoroionophore for detection of potassium ions: 9-anthryl-substituted azacrown ether covalently linked to a 1,3-alternate calix[4]arene, 33

### Carbon tetrachloride

Photochemical degradation of carbon tetrachloride mediated by 3-*R*-2(3*H*)-benzothiazol-2-ones and ultrasound effect on this degradation, 135

### Carboxyl group of tyrosine

Acidity of carboxyl group of tyrosine and its analogues and derivatives studied by steady-state fluorescence spectroscopy, 73

### Chemiluminescence

Studies on the photostoragechemiluminescence of aromatic ketones with reactive oxygen species. Prospects for analytical applications, 11

### (Chloromethyl)silane

Transient detection in infrared multiphoton decomposition of (chloromethyl)silane and 1,3-disilacyclobutane: evidence for cleavage of  $\text{SiCH}_3$  intermediates, 17

### Circular dichroism spectra

Photoelectrochemistry of photosynthetic reaction centers embedded in  $\text{Al}_2\text{O}_3$  gel, 53

### Commercial potential

A web-based overview of semiconductor photochemistry-based current commercial applications, 233

### Competition kinetics

Near-UV–VIS light induced acid orange 7 bleaching in the presence of  $\text{SiW}_{12}\text{O}_{40}^{4-}$  catalyst, 175

### Concentration effects

The 254 nm low intensity and 266 nm laser photochemistry of adenosine. Effect of pH and concentration on the reactive precursors of the principal products, adenine and FAPyAde, 123

### Coumarins

Electronic energy transfer efficiency of mixed solutions of the donor–acceptor pairs: coumarin derivatives—acridine orange, 199

### Cycloaddition

Intramolecular [2 + 2] cycloaddition of some 1,*n*-diene-1,1-dicarbonyl-triles. Difference between singlet and triplet reactivity, 103

### Decomposition mechanisms

Transient detection in infrared multiphoton decomposition of (chloromethyl)silane and 1,3-disilacyclobutane: evidence for cleavage of  $\text{SiCH}_3$  intermediates, 17

### Degradation product

Formation of organic indoor air pollutants by UV-curing chemistry, 1

### 4-Diethylaminoazobenzene

Photodecomposition of substituted 4-diethylaminoazobenzenes under visible light irradiation in different solvents, 193

### Dipalmitoyl phosphatidyl choline

Effect of gramicidin addition upon the physicochemical properties of dipalmitoyl phosphatidyl choline large unilamellar vesicles, 79

### 1,3-Disilacyclobutane

Transient detection in infrared multiphoton decomposition of (chloromethyl)silane and 1,3-disilacyclobutane: evidence for cleavage of  $\text{SiCH}_3$  intermediates, 17

### Dithienylethene dimer

Photochromic reactivity of a dithienylethene dimer, 141

### Dye-sensitized solar cell

Effect of functional group on photochemical properties and photosensitization of  $\text{TiO}_2$  electrode sensitized by porphyrin derivatives, 207

## Electron transfer

Comparative studies on inter- and intramolecular electron transfer processes within 4-methoxybenzo[b]thiophene (4MBT) and *p*-chloroacetophenone (PCA) reacting systems by using steady-state and laser flash photolysis techniques, 41

## Electro-oxidation

Synergetic effect in degradation of formic acid using a new photoelectrochemical reactor, 155

## Emission testing

Formation of organic indoor air pollutants by UV-curing chemistry, 1

## Ethanol radical addition

Photocatalytic transformation of rhodamine B and its effect on hydrogen evolution over Pt/TiO<sub>2</sub> in the presence of electron donors, 219

## Exciplex

Intramolecular [2 + 2] cycloaddition of some 1,*n*-diene-1,1-dicarbonyl-triles. Difference between singlet and triplet reactivity, 103

## Excitation energies

Reaction mechanism of thymine dimer formation in DNA induced by UV light, 95

## Excitation energy transfer

Electronic energy transfer efficiency of mixed solutions of the donor-acceptor pairs: coumarin derivatives—acridine orange, 199

## Flash photolysis

Comparative studies on inter- and intramolecular electron transfer processes within 4-methoxybenzo[b]thiophene (4MBT) and *p*-chloroacetophenone (PCA) reacting systems by using steady-state and laser flash photolysis techniques, 41

## Fluorenols

Photocatalytic oxidation of selected fluorenols on TiO<sub>2</sub> semiconductor, 229

## Fluorescence

Excited state intramolecular proton transfer in some tautomeric azo dyes and schiff bases containing an intramolecular hydrogen bond, 183

## Fluorescence quenching

Substituent effect on the fluorescence quenching of various tetraphenylporphyrins by ruthenium tris(2,2'-bipyridine) complex, 25

Comparative studies on inter- and intramolecular electron transfer processes within 4-methoxybenzo[b]thiophene (4MBT) and *p*-chloroacetophenone (PCA) reacting systems by using steady-state and laser flash photolysis techniques, 41

## Fluoroionophore

A fluoroionophore for detection of potassium ions: 9-anthryl-substituted azacrown ether covalently linked to a 1,3-alternate calix[4]arene, 33

## Formic acid

Synergetic effect in degradation of formic acid using a new photoelectrochemical reactor, 155

## Functional group

Effect of functional group on photochemical properties and photosensitization of TiO<sub>2</sub> electrode sensitized by porphyrin derivatives, 207

## Gel-xerogel transition

Investigation of drying silica gel by fluorescence methods, 249

## Gramicidin

Effect of gramicidin addition upon the physicochemical properties of dipalmitoyl phosphatidyl choline large unilamellar vesicles, 79

## Heterogeneous photocatalysis

Photocatalytic synthesis of thio-organic compounds: case study of propan-1-thiol, 147

## Heteropolyblue

Near-UV-VIS light induced acid orange 7 bleaching in the presence of SiW<sub>12</sub>O<sub>40</sub><sup>4-</sup> catalyst, 175

## Humic acids

Photocatalytic decomposition of humic acids on TiO<sub>2</sub>. Part I: Discussion of adsorption and mechanism, 267

## Hydrogen abstraction

Detection of uranyl ion via fluorescence quenching and photochemical oxidation of calcein, 167

## Hydrogenation

Photocatalytic transformation of rhodamine B and its effect on hydrogen evolution over Pt/TiO<sub>2</sub> in the presence of electron donors, 219

## 2-Hydroxychalcones

Photochromic properties of hydrolysed benzopyrylium salts—the influence of bridging, 61

## Infrared multiphoton dissociation

Transient detection in infrared multiphoton decomposition of (chloromethyl)silane and 1,3-disilacyclobutane: evidence for cleavage of SiCH<sub>3</sub> intermediates, 17

## Kinetics

Kinetic studies of the photoinitiated NO-releasing reactions of *N,N'*-bis-(carboxymethyl)-*N,N'*-dinitroso-1,4-phenylenediamine, 109

## Large unilamellar vesicle

Effect of gramicidin addition upon the physicochemical properties of dipalmitoyl phosphatidyl choline large unilamellar vesicles, 79

## Laser flash photolysis

The 254 nm low intensity and 266 nm laser photochemistry of adenosine. Effect of pH and concentration on the reactive precursors of the principal products, adenine and FAPyAde, 123

## Laser-induced fluorescence

Transient detection in infrared multiphoton decomposition of (chloromethyl)silane and 1,3-disilacyclobutane: evidence for cleavage of SiCH<sub>3</sub> intermediates, 17

## Lead (II) 2-ethylhexanoate

The mechanism of the photochemical metal organic deposition of lead oxide films from thin films of lead (II) 2-ethylhexanoate, 259

## Lead (II) oxide

The mechanism of the photochemical metal organic deposition of lead oxide films from thin films of lead (II) 2-ethylhexanoate, 259

## Mechanism

Kinetic studies of the photoinitiated NO-releasing reactions of *N,N'*-bis-(carboxymethyl)-*N,N'*-dinitroso-1,4-phenylenediamine, 109

## Mechanism of formation

The 254 nm low intensity and 266 nm laser photochemistry of adenosine. Effect of pH and concentration on the reactive precursors of the principal products, adenine and FAPyAde, 123

Nanocrystalline TiO<sub>2</sub>

Effect of functional group on photochemical properties and photosensitization of TiO<sub>2</sub> electrode sensitized by porphyrin derivatives, 207

## Nanostructured

Trapping of electrons in nanostructured TiO<sub>2</sub> studied by photocurrent transients, 213

## Nitric oxide generation

Kinetic studies of the photoinitiated NO-releasing reactions of *N,N'*-bis-(carboxymethyl)-*N,N'*-dinitroso-1,4-phenylenediamine, 109

## pH effects

The 254 nm low intensity and 266 nm laser photochemistry of adenosine. Effect of pH and concentration on the reactive precursors of the principal products, adenine and FAPyAde, 123

## Photocatalysis

Synergetic effect in degradation of formic acid using a new photoelectrochemical reactor, 155

Photocatalytic decomposition of humic acids on TiO<sub>2</sub>. Part I: Discussion of adsorption and mechanism, 267

## Photocatalytic hydrogen evolution

Photocatalytic transformation of rhodamine B and its effect on hydrogen evolution over Pt/TiO<sub>2</sub> in the presence of electron donors, 219

- Photocatalytic oxidation**  
 Photocatalytic oxidation of selected fluorenols on TiO<sub>2</sub> semiconductor, 229
- Photochemical degradation**  
 Photochemical degradation of carbon tetrachloride mediated by 3-R-2(3*H*)-benzothiazol-2-ones and ultrasound effect on this degradation, 135
- Photochemical treatment**  
 Near-UV–VIS light induced acid orange 7 bleaching in the presence of SiW<sub>12</sub>O<sub>40</sub><sup>4−</sup> catalyst, 175
- Photochemistry**  
 The mechanism of the photochemical metal organic deposition of lead oxide films from thin films of lead (II) 2-ethylhexanoate, 259
- Photochromic reactivity**  
 Photochromic reactivity of a dithienylethene dimer, 141
- Photochromism**  
 Photochromic properties of hydrolysed benzopyrylium salts—the influence of bridging, 61
- Photocurrent**  
 Photoelectrochemistry of photosynthetic reaction centers embedded in Al<sub>2</sub>O<sub>3</sub> gel, 53
- Photodecomposition**  
 Photodecomposition of substituted 4-diethylaminoazobenzenes under visible light irradiation in different solvents, 193
- Photoelectrocatalysis**  
 Synergetic effect in degradation of formic acid using a new photoelectrochemical reactor, 155
- Photoelectrochemical properties**  
 Effect of functional group on photochemical properties and photosensitization of TiO<sub>2</sub> electrode sensitized by porphyrin derivatives, 207
- Photoelectrochemical reactor**  
 Synergetic effect in degradation of formic acid using a new photoelectrochemical reactor, 155
- Photoinduced electron transfer**  
 Substituent effect on the fluorescence quenching of various tetraphenylporphyrins by ruthenium tris(2,2′-bipyridine) complex, 25  
 A fluoroionophore for detection of potassium ions: 9-anthryl-substituted azacrown ether covalently linked to a 1,3-alternate calix[4]arene, 33
- Photoinitiator**  
 Formation of organic indoor air pollutants by UV-curing chemistry, 1
- Photoisomerisation**  
 Intramolecular [2 + 2] cycloaddition of some 1,*n*-diene-1,1-dicarbonyl-triles. Difference between singlet and triplet reactivity, 103
- Photolysis**  
 Studies on the photostoragechemiluminescence of aromatic ketones with reactive oxygen species. Prospects for analytical applications, 11
- Photonicity determination**  
 The 254 nm low intensity and 266 nm laser photochemistry of adenosine. Effect of pH and concentration on the reactive precursors of the principal products, adenine and FAPyAde, 123
- Photooxidation**  
 Detection of uranyl ion via fluorescence quenching and photochemical oxidation of calcein, 167
- Polar olefin**  
 Intramolecular [2 + 2] cycloaddition of some 1,*n*-diene-1,1-dicarbonyl-triles. Difference between singlet and triplet reactivity, 103
- Polyoxometalates**  
 Near-UV–VIS light induced acid orange 7 bleaching in the presence of SiW<sub>12</sub>O<sub>40</sub><sup>4−</sup> catalyst, 175
- Porphyrin derivatives**  
 Effect of functional group on photochemical properties and photosensitization of TiO<sub>2</sub> electrode sensitized by porphyrin derivatives, 207
- Porphyrins**  
 Substituent effect on the fluorescence quenching of various tetraphenylporphyrins by ruthenium tris(2,2′-bipyridine) complex, 25
- Propan-1-thiol**  
 Photocatalytic synthesis of thio-organic compounds: case study of propan-1-thiol, 147
- Proton transfer**  
 Excited state intramolecular proton transfer in some tautomeric azo dyes and schiff bases containing an intramolecular hydrogen bond, 183
- Pt/TiO<sub>2</sub>**  
 Photocatalytic transformation of rhodamine B and its effect on hydrogen evolution over Pt/TiO<sub>2</sub> in the presence of electron donors, 219
- Pyrene**  
 Investigation of drying silica gel by fluorescence methods, 249
- Quantum yield of adenosine's photodestruction**  
 The 254 nm low intensity and 266 nm laser photochemistry of adenosine. Effect of pH and concentration on the reactive precursors of the principal products, adenine and FAPyAde, 123
- Quantum yield of product's formation**  
 The 254 nm low intensity and 266 nm laser photochemistry of adenosine. Effect of pH and concentration on the reactive precursors of the principal products, adenine and FAPyAde, 123
- 3-R-2(3*H*)-Benzothiazol-2-ones**  
 Photochemical degradation of carbon tetrachloride mediated by 3-R-2(3*H*)-benzothiazol-2-ones and ultrasound effect on this degradation, 135
- R<sub>0</sub> and k<sub>ET</sub> determination**  
 Electronic energy transfer efficiency of mixed solutions of the donor–acceptor pairs: coumarin derivatives—acridine orange, 199
- Reaction center**  
 Photoelectrochemistry of photosynthetic reaction centers embedded in Al<sub>2</sub>O<sub>3</sub> gel, 53
- Reactive oxygen species**  
 Studies on the photostoragechemiluminescence of aromatic ketones with reactive oxygen species. Prospects for analytical applications, 11
- Rhodamine B**  
 Photocatalytic transformation of rhodamine B and its effect on hydrogen evolution over Pt/TiO<sub>2</sub> in the presence of electron donors, 219
- Rhodobacter sphaeroides**  
 Photoelectrochemistry of photosynthetic reaction centers embedded in Al<sub>2</sub>O<sub>3</sub> gel, 53
- Schiff bases**  
 Excited state intramolecular proton transfer in some tautomeric azo dyes and schiff bases containing an intramolecular hydrogen bond, 183
- Semiconductor photochemistry**  
 A web-based overview of semiconductor photochemistry-based current commercial applications, 233
- Sensitisation**  
 Intramolecular [2 + 2] cycloaddition of some 1,*n*-diene-1,1-dicarbonyl-triles. Difference between singlet and triplet reactivity, 103
- Silane**  
 Investigation of drying silica gel by fluorescence methods, 249
- SiW<sub>12</sub>O<sub>40</sub><sup>4−</sup> catalyst**  
 Near-UV–VIS light induced acid orange 7 bleaching in the presence of SiW<sub>12</sub>O<sub>40</sub><sup>4−</sup> catalyst, 175
- Steady-state fluorescence**  
 Investigation of drying silica gel by fluorescence methods, 249
- Steady-state fluorescence spectroscopy**  
 Acidity of carboxyl group of tyrosine and its analogues and derivatives studied by steady-state fluorescence spectroscopy, 73
- Surface coatings**  
 Formation of organic indoor air pollutants by UV-curing chemistry, 1
- Synergetic effect**  
 Synergetic effect in degradation of formic acid using a new photoelectrochemical reactor, 155

## Synthesis

- Kinetic studies of the photoinitiated NO-releasing reactions of *N,N'*-bis-(carboxymethyl)-*N,N'*-dinitroso-1,4-phenylenediamine, 109

## Tautomerism

- Excited state intramolecular proton transfer in some tautomeric azo dyes and schiff bases containing an intramolecular hydrogen bond, 183

## Textile azo dyes

- Near-UV-VIS light induced acid orange 7 bleaching in the presence of  $\text{SiW}_{12}\text{O}_{40}^{4-}$  catalyst, 175

## Thiochemistry

- Photocatalytic synthesis of thio-organic compounds: case study of propan-1-thiol, 147

## Thiophotocatalysis

- Photocatalytic synthesis of thio-organic compounds: case study of propan-1-thiol, 147

## Thymine dimer formation

- Reaction mechanism of thymine dimer formation in DNA induced by UV light, 95

## Time-dependent density functional theory

- Reaction mechanism of thymine dimer formation in DNA induced by UV light, 95

## Time-resolved fluorescence

- Investigation of drying silica gel by fluorescence methods, 249

## Time-resolved spectra

- Comparative studies on inter- and intramolecular electron transfer processes within 4-methoxybenzo[b]thiophene (4MBT) and *p*-chloroacetophenone (PCA) reacting systems by using steady-state and laser flash photolysis techniques, 41

 $\text{TiO}_2$ 

- Trapping of electrons in nanostructured  $\text{TiO}_2$  studied by photocurrent transients, 213
- Photocatalytic oxidation of selected fluorenols on  $\text{TiO}_2$  semiconductor, 229

## Titanium dioxide

- Photocatalytic synthesis of thio-organic compounds: case study of propan-1-thiol, 147
- Photocatalytic decomposition of humic acids on  $\text{TiO}_2$ . Part I: Discussion of adsorption and mechanism, 267

## TOC

- Photocatalytic decomposition of humic acids on  $\text{TiO}_2$ . Part I: Discussion of adsorption and mechanism, 267

## Transport

- Trapping of electrons in nanostructured  $\text{TiO}_2$  studied by photocurrent transients, 213

## Traps

- Trapping of electrons in nanostructured  $\text{TiO}_2$  studied by photocurrent transients, 213

## Ultraviolet light

- Photochromic reactivity of a dithienylethene dimer, 141

## Uranyl

- Detection of uranyl ion via fluorescence quenching and photochemical oxidation of calcein, 167

## UV light

- Reaction mechanism of thymine dimer formation in DNA induced by UV light, 95

## UV-curing

- Formation of organic indoor air pollutants by UV-curing chemistry, 1

## Visible light

- Photodecomposition of substituted 4-diethylaminoazobenzenes under visible light irradiation in different solvents, 193

## World wide web

- A web-based overview of semiconductor photochemistry-based current commercial applications, 233

# AUTHORS

**If you want to make the best of your artwork  
send it in the correct digital format**

All articles accepted for publication in Elsevier Science journals are processed using electronic production methods. Authors should therefore ensure that their artwork conforms to the following guidelines:

- **Colour and greyscale images** should be supplied as **TIFF** or **EPS** files (resolution 300 dpi).
- **Line drawings (black & white or colour)** should be supplied as **EPS** files

*If you need help to create files in these formats, go to [www.elsevier.nl/locate/authorartwork/formats](http://www.elsevier.nl/locate/authorartwork/formats)*

Please also note:

- We still need a good quality hard copy of each figure in case the electronic file cannot be used. The hard copy and electronic file must match exactly.
- We can use floppy disks, ZIP disks or CD-ROM. Artwork files should be on a separate disk or CD to article text files.  
**[www.elsevier.nl/locate/authorartwork/media](http://www.elsevier.nl/locate/authorartwork/media)**
- Only standard fonts should be used, for example: *Times, Times New Roman, Helvetica, Arial, Symbol*  
**[www.elsevier.nl/locate/authorartwork/formats](http://www.elsevier.nl/locate/authorartwork/formats)**
- Lines should be a minimum width of 0.5 pt.  
**[www.elsevier.nl/locate/authorartwork/linewidth](http://www.elsevier.nl/locate/authorartwork/linewidth)**
- Only standard colours should be used.  
**[www.elsevier.nl/locate/authorartwork/colours](http://www.elsevier.nl/locate/authorartwork/colours)**
- Lettering should be a consistent size and appropriate to the size of the figure.  
**[www.elsevier.nl/locate/authorartwork/sizing](http://www.elsevier.nl/locate/authorartwork/sizing)**
- An image which looks acceptable on a computer may not reproduce well, so it is important to ensure that these guidelines are followed.

*Our Author Artwork website has all the information you need on  
how to submit your artwork correctly. Visit it today at:*

**[www.elsevier.nl/locate/authorartwork](http://www.elsevier.nl/locate/authorartwork)**

# Guide for Authors

## Submission of Papers

Authors are requested to submit their manuscripts to

### Editor-in-Chief: Professor R.P. Wayne

Physical and Theoretical Chemistry Laboratory  
South Parks Road  
Oxford OX1 3QZ  
UK

FAX: +44 (1865) 275410

E-MAIL: [jphoto@physchem.ox.ac.uk](mailto:jphoto@physchem.ox.ac.uk)

Authors in the USA and Canada may submit their manuscripts to the North American Editor:

### Professor R. Schmehl

Department of Chemistry  
Tulane University  
New Orleans, LA 70118  
USA

FAX: +1-504-865-5596

E-MAIL: [russ@tulane.edu](mailto:russ@tulane.edu)

Authors in Asia should submit their manuscripts to the Asian Editor:

### Professor H. Masuhara

Faculty of Engineering  
Department of Applied Physics  
Osaka University  
Yamadaoka 2-1  
Suita, Osaka 565-0871  
Japan

FAX: +81 6 6876 8580

E-MAIL: [masuhara@ap.eng.osaka-u.ac.jp](mailto:masuhara@ap.eng.osaka-u.ac.jp)

The full postal address, fax and telephone numbers, and e-mail address of the corresponding author must be given on the first (title) page of the manuscript.

Contributions are accepted on the understanding that authors have obtained the necessary authority for publication. Submission of an article is understood to imply that the article is original and unpublished and is not being considered for publication elsewhere. Upon acceptance of an article by the journal, the author(s) will be asked to transfer the copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

## Language

Papers will be published in English.

Authors in Japan please note that information about how to have the English of your paper checked, corrected and improved (*before submission*) is available from: Elsevier Science Japan, Editorial Service, 1-9-15 Higashi Azabu, Minato-ku, Tokyo 106-0044, Japan; Tel.: +81-3-5561-5032; Fax: +81-3-5561-5045; E-mail: [info@elsevier.co.jp](mailto:info@elsevier.co.jp)

## Manuscript Preparation

Three copies of the manuscript should be submitted, in double-spaced typing on pages of uniform size with a wide margin on the left. Some flexibility of presentation will be allowed but authors are urged to arrange the subject matter clearly under headings such as Introduction, Experimental details, Results, Discussion, etc. References should be numbered consecutively (numerals in square brackets) throughout the text and collected together in a reference list at the end of the paper. Journal titles should be abbreviated according to the Chemical Abstracts Service Source Index, 1970 edition, and supplements. The abbreviated title should be followed by volume number, year (in parentheses) and page number. Authors are reminded that delays in publication may occur if the instructions for submission and disk and manuscript preparation are not strictly followed. Authors are strongly recommended to submit disks to aid rapid processing. To facilitate communication, authors are requested to provide their current e-mail address, phone and fax number.

## Illustrations

Line drawings and cyclic or aromatic formulae should be in a form suitable for reproduction, drawn in Indian ink on drawing paper. They should preferably all require the same degree of reduction, and should be submitted on paper of the same size as, or smaller than, the main text to prevent damage in transit. Photographs should be submitted as clear black-and-white prints on glossy paper. Each illustration must be clearly numbered. "Quantity calculus" notation should be used for the labelling of the graph axes. Legends to the illustrations must be submitted in a separate list. All tables and illustrations should be numbered consecutively and separately throughout the paper.

## Offprints

Fifty offprints are provided free of charge to the corresponding author. Extra offprints can be ordered at prices shown on the offprint order form.

## Further Information

When the article has been accepted for publication and is in production, contact Elsevier Science at: [authorsupport@elsevier.ie](mailto:authorsupport@elsevier.ie) for author information; manuscript status may also be tracked using Elsevier's Author Gateway (<http://authors.elsevier.com>). Authors can also keep a track on the progress of their accepted article, and set up email alerts informing them of changes to their manuscript's status, by using the "Track a Paper" feature of Elsevier's Author Gateway (<http://authors.elsevier.com>).

# Authors did you know...

■ Your article published with Elsevier Science is also included in ScienceDirect, the world's largest scientific network, reaching over 9 million scientists and researchers at [www.sciencedirect.com](http://www.sciencedirect.com).

■ If your institute or organisation currently subscribes to ScienceDirect, you now have access to the full text of those journals in your subscription package at your desktop.

■ ScienceDirect allows you to keep track of citations to your article via e-mail. You can set up a personal profile to ensure you are kept up-to-date with publications in your specialist areas of research.

■ The publication of your article is announced in advance to thousands of registrants to our FREE e-mail alerting service **ContentsDirect**. Find out more by accessing [www.elsevier.com/locate/contentsdirect](http://www.elsevier.com/locate/contentsdirect)

■ Your article will be available in the ScienceDirect electronic archive and as such accessible to the millions of scientists visiting our database for an unlimited period of time.

ScienceDirect provides the articles **you** need for **your** research – [www.sciencedirect.com](http://www.sciencedirect.com)

To find out more about publishing your article with Elsevier Science, access [www.elsevier.com/homepage/authors](http://www.elsevier.com/homepage/authors)
